Profile

A proactive and technically skilled forensics fresher with a strong grasp of cybersecurity fundamentals and hands-on experience with tools like Burp Suite and Nmap. Passionate about identifying security vulnerabilities and enhancing system defenses. Known for a keen eye for detail, strong analytical capabilities, and a collaborative approach to problem-solving. Dedicated to continuously expanding knowledge and staying abreast of the latest security trends and technologies.

Skills

Networking

Hands-on experience with network protocols such as TCP/IP, DHCP, DNS, and VLANs

Web Application Security

Expertise in vulnerability assessments and penetration testing on web applications using tools like Burp Suite, OWASP, and Metasploit.

Ethical Hacking

Proficient in conducting vulnerability assessments and penetration testing using tools such as Nmap, Metasploit, and Wireshark.

Python

Familiar with popular Python libraries such as NumPy, pandas, matplotlib, and frameworks like Flask for web development.

Linux

Proficient in using Linux operating systems (RHEL, Kali etc.). Experienced with basic Linux commands and shell scripting

Report Writing

Proficient in writing detailed and structured reports, including sections like Executive Summary, Vulnerabilities Found, Risk Assessment, Exploitation Methodology, and Mitigation Strategies.

Forensics

Proficient in conducting digital forensic investigations, including evidence acquisition, analysis, and reporting, using tools such as Autopsy, FTK Imager, and Magnet Axiom. Skilled in network traffic analysis with Wireshark and adept at recovering deleted files and examining system logs for anomaly detection.

Tools

- Nmap
- Dirsearch
- Metasploit
- Autopsy
- FTK Imager
- SQL Map
- WP Scan
- Hydra
- Wireshark
- Burp Suite
- Magnet Axiom
- DH HackBar

Professional Experience

Penetration Tester (Intern)
Deltaware Solutions Pvt. Ltd.

August 2025 –
October 2025
Remote

Projects

Nexa
Intelligent Port Scanner

September 2025 –
October 2025

NEXA is a fast, opinionated, Python-based network scanner that merges asynchronous TCP connect scanning with optional Nmap enrichment and Gemini-CLI (AI) analysis to produce compact, intelligible security reports. NEXA focuses on producing actionable, reproducible artifacts (scan summaries, JSON reports) and an AI-generated remediation summary.

HashSmasher
Hash Cracker

August 2025 –
September 2025

Fast GPU/CPU Hash Cracker built with Rust (core) + Python (interface). HashSmasher is designed to be **simple, fast, and user-friendly** with GPU acceleration (OpenCL) and automatic CPU fallback.

<https://github.com/killer12160/hashsmasher.git> 

BULLS_EYE Botnet
DDoS Tool

BULLS EYE is a powerful, Python-based botnet framework built for **cybersecurity research, red teaming, and educational simulation of large-scale network attacks**.

This project is designed to showcase the workings of advanced botnet infrastructures, focusing on control, scalability, and realistic behavior
